

Happy New Year!

We would like to wish all medtech researchers and PhD's a very Happy New Year! In the spirit of new beginnings, we have decided that all communication to the research environment will be in English, as we would like to open up the channels for communication to include foreign researchers and students. In 2011 we plan to commence a number of exciting activities and to kick-start innovative collaboration projects primarily within our three focus areas; Image diagnostics, minimally invasive surgery and tele-care. But we are also open for suggestions for new interesting topics.

A Bazaar of Research Projects

Medico Innovation would like to thank all those whom participated in the Medico Bazaar on the 16th of December. Information on participants, research projects and pictures can be found on the following link

<http://www.medico-innovation.dk/aktiviteter/afholdte/>

Communicate Your Current Research

A major goal at Medico Innovation is to map out and market current research projects relevant to medical technology at DTU (and later include other research institutions in Denmark). New and relevant projects will be communicated on our website as well as featured in our broad newsletter sent out to many interest groups in the medtech sector.

Therefore, we would like to hear from you and what you might be working on currently that you would like to communicate out to a broader audience. We are also actively seeking out all the projects that were represented at our Christmas Bazaar event, and would very much like to hear from those who unfortunately couldn't make it.

Information regarding medtech research projects can be directed to Stine Kruse at kruse@adm.dtu.dk.

Upcoming MedTech Research Events

Following our success with the Medico Bazaar, Medico Innovation is planning the next medtech research networking event. The theme of the event will be "funding future medtech projects". We are hoping to be able to do a quick turnaround and realize the event in February. Details will follow in the near future; in addition we will post it on our website on the following link <http://www.medico-innovation.dk/aktiviteter/kommende/>.

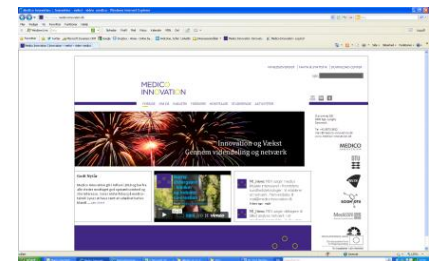

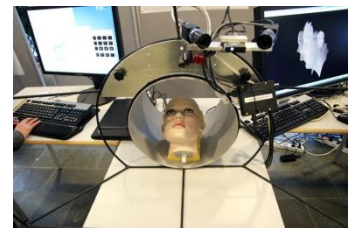

Image Diagnostics Network

We are in the process of developing a knowledge sharing network which focuses upon *image diagnostics*. The network will include members from the medtech industry, clinicians, as well as researchers. The activities in the network will bridge across sectors and open up for new collaborative partnerships as well as exchanging innovative ideas and knowledge. If you should be interested in joining this network or know of any relevant persons or companies to invite, then please inform us at mail@medico-innovation.dk or call us at (+45) 8870 8830.

Technology of the Month

In an effort to promote research, technologies, and projects Medico Innovation will present a special feature in our broad newsletter called, "technology of the month". A brief executive summary in Danish will explain the headline of the project as well as a link to a two page description of the technology on our main website. If you are interested in promoting your research project please contact Sofie Wandrup at Medico Innovation (swa@medico-innovation.dk).
